# Holiday Park LPG

Celebrating over  
30 years supplying  
the holiday park  
industry

CamGas are experts in providing Holiday and Home Park businesses with a continuous, hassle free gas supply.

# Introducing CamGas LPG Suppliers

Spanning across several decades, CamGas have gained an unrivalled reputation in supplying an outstanding, fully-serviced LPG package to park operators throughout North and Mid Wales.

Our dedicated in-house LPG engineering team and logistics department provide a bespoke service catered to each individual park's requirements. We understand that one size doesn't fit all in this industry and neither should our services, this is evident right down to our customer care.

LPG is our speciality and no job is too big or small – whether you're looking to facilitate bulk tanks above or below ground, piped LPG systems, meter boxes or simply require trusted, expert advice, we cover it all.

Enclosed in this brochure are several examples of the installations we have delivered over the years, along with excellent testimonials from our extremely satisfied customers.

We would be thrilled to work with you on your park operation and would like to arrange a free, no obligation site survey. Please contact one of our friendly team on [01244 520551](tel:01244 520551) or email [enquiries@camgas.co.uk](mailto:enquiries@camgas.co.uk).

We look forward to hearing from you shortly.

# Company Timeline

The history of CamGas within the Leisure Park Industry stretches back much further than its creation in 1990, starting with the setup of Amazon Gas by Pat Ardis, CamGas's Managing Director. The below timeline demonstrates CamGas's successful foundation and how it grew to make it one of the leading LPG suppliers known today.

## Testimonials

"We have been using CamGas for our LPG supply at our Leylands Caravan Park now for over 25 years.

It's great to deal with a family run company who you can call up and speak with a member of their expert customer service team who will help you with any LPG queries and questions you may have.

Brilliant service!"

**TREVOR BEBB**

Leylands Caravan Park

"We have been with CamGas for many years. No matter what our issue, they have always dealt with any problems fast and efficiently. We have always been able to get in touch and speak to the right people at the company all the way up to the owners and management and nothing has been too much trouble. It is this personal touch and family feel that make CamGas stand out from the rest."

## CASE STUDY TREE TOPS CARAVAN PARK

# New Install and LPG Site Development

Back in 2018, family-owned Tree Tops Caravan Park in North Wales were coming to the end of their contract with their existing LPG supplier and took the opportunity to seek other leading supplier recommendations from friends within the industry. CamGas were one of the recommendations.

On meeting the owners of Tree Tops, we quickly established a working relationship and developed a strategy tailored to their requirements. Outlined in their initial brief, Tree Tops specified the importance of partnering with a company who would become an extension of their own team, who they could rely on when things didn't go to plan and who understood the family orientation of their business.

We proposed removing their existing seven tanks – four above ground, three below ground, located in three separate compounds across the Tree Tops site. We then installed four CamGas tanks in their newly developed compound which would maximise all available park space.

With great satisfaction, we completed the work in four days, ensuring minimal disruption to the park. Tree Tops now enjoy a new, efficient LPG supply. In addition, they now benefit from a single tanker delivery point, reduced tank rentals and increased parking spaces. Also, in one of the vacated compounds Tree Tops have introduced beehives further enhancing the park's green credentials.

"We were becoming more and more frustrated by the lack of service and pricing we were receiving from our previous supplier. When we talked to other park owners, one name repeatedly came up, CamGas.

From the outset our dealings with CamGas have been refreshing, they are responsive and have worked to build relationships with us.

The changeover of our tanks was no small project, but it was very well managed by the engineers.

We look forward to working with Pat and the team for many years to come and would highly recommend CamGas to other park operators."

**Andrew Walker - Tree Tops Caravan Park**

## CASE STUDY GLAN GWNA HOLIDAY PARK

# Tank Exchange

Glan Gwna is a private countryside Holiday Home Park in North Wales for caravans and lodges. Nestled in a secluded wooded valley and located just two miles from Caernarfon on the edge of the Snowdonia National Park.

In 2018, Glan Gwna's owners were exploring the opportunity to change the LPG supplier to their park as they required additional LPG expertise and a seamless delivery service. With the large site already fully developed to a high standard, the requirement was a simple task of exchanging their existing twelve tanks that supplied the park.

At the same time we took the opportunity to install newly fabricated steel pipework to connect the supply to the underground LPG system.

We are thrilled to report that the job was very straight forward and no major issues arose during the changeover of the tanks. The final task involved transferring the remaining gas from the old tanks into the new tanks to ensure no loss of product for the customer.

"The changeover to CamGas was quick and hassle free, great customer service and proven experts in this sector. Can highly recommend."

## CASE STUDY HERONS LAKE RETREAT

# Cylinder Telemetry

Herons Lake Retreat is a prestigious lodge park situated in North Wales, featuring tranquil lake views that can be admired from the comfort of your veranda while soaking in a luxurious hot tub.

This busy hire fleet site recognised the need to reduce man-hours and the manual handling involved with changing cylinders on a daily basis by the park's workforce, which were located throughout the park. Additionally, they wanted to eliminate the worry of forgetting to order and manage the sites LPG requirements.

After an effective site survey, bulk LPG was quickly ruled out as it would be too disruptive to the park as it sits on an old stone quarry. The agreed solution was a full cylinder telemetry monitoring system, operated on ITO Europe automatic OPSO changeover valves.

Due to the systems plug and play capability, all sixty lodges were fitted within one day, immediately allowing gas orders to be sent directly to the CamGas head office. With this newly installed gas system for Herons Lake Retreat, deliveries are now being made direct from their local CamGas depot to individual lodges.

Herons Lake's Operations Manager, John Roberts, highlighted advantage after advantage to their company with a reduction in cylinder stock, man-hours and emergency call-outs.

## ITO TAX LPG Changeover

The TAX Changeover is manufactured from aluminium with a high-performance coating providing strong resistance in aggressive environments such as coastal regions. Its high capacity allows up to 8 cylinders to be installed.

The signal mechanism contains magnets which ensures a positive signal is sent – no false alarms. The Gaslog telemetry unit has a 10 – 15 year battery life and is fully sealed to be completely protected from the elements.

"In short it's one less job for my guys to do on an exceptionally busy park, CamGas do it all."

## CASE STUDY MAES MYNAN PARK

# Greenfield Site

**Bursting with natural charm and picturesque views, Maes Mynan Park, a new Acorn Leisure development, is the perfect setting for exclusive rural holiday homes and staycation holidays.**

CamGas were delighted to be awarded the contract to supply this prestigious new greenfield site in early 2019.

Starting with design, then installation and through to aftercare, CamGas have worked with park management to render the necessary working solutions for each holiday pitch.

As the Maes Mynan Park development will eventually include 180 units, comprising of lodges, static caravans and touring caravans, it was beneficial for CamGas to be part of the development process. It was agreed from the outset that all units will be connected to the LPG system through a meter box - perfect for allowing Acorn Leisure customer's to understand their own individual energy usage, whilst offering park management an accurate gas consumption for billing purposes.

In addition this system is fitted with telemetry enabling live monitoring of the sites LPG levels. This offers peace of mind to park management, as it ensures LPG deliveries will be made automatically whenever needed.

"We have been working with CamGas over many years on our other holiday parks and have been impressed by their professional service, which goes much further than the delivery of LPG supplies! By working with us from the start of our new holiday park development at Maes Mynan, we have been able to add meter boxes to each pitch as we evolve and grow, reducing unnecessary damage and expense. The staff have always been helpful, intuitive and knowledgeable.

CamGas has shown over the years how adaptable they are to any LPG industry changes, something that proves invaluable to businesses utilising their services. We would happily recommend CamGas to other businesses in need of their services."

# LPG Training

*Our expertise at your fingertips*

Developers of Training  
and Assessment Solutions  
for Your Business...

LPG Training is a well-known, established training scheme that provides expert and specialist LPG training through excellent training manuals and courses. Over the years, LPG Training has successfully expanded and now delivers training worldwide.

Their LPG training manuals are fast becoming the gold standard and first choice for other gas training centres and colleges. The range of manuals available are tailored to each individual customer's requirements and can cover virtually any use of LPG.

Recently, a new manual was produced, 'A Park Managers Guide To LPG', designed specifically for Park Managers. The objective of the manual is to help ensure their park's LPG system is maintained to regulatory standards. In addition to these manuals, bespoke courses are also provided to park owners and employees.

To request a **FREE** copy of the manual "A Park Managers Guide To LPG" please email [enquires@camgas.co.uk](mailto:enquires@camgas.co.uk) and quote code **CAMGAS30YEARS**.

For information on upcoming courses at LPG Training please visit [www.lpgtraining.co.uk](http://www.lpgtraining.co.uk) or email direct on [mail@lpgtraining.co.uk](mailto:mail@lpgtraining.co.uk).

"LPG Training have specialised in providing gas courses to the leisure market for over seventeen years. Whether that be custom built courses specifically for your park or training staff to become Gas Safe registered engineers, we have the expertise and training facilities to accommodate all your LPG requirements."

Ian Oultram - Director LPG Training
